

# Protecting the Environment

**Greater investment in public transportation should be part of the climate change bill.**

One-third of U.S. carbon dioxide emissions comes from transportation sources. Public transportation already reduces those emissions by 37 million metric tons each year.

Whether it's more jobs, a cleaner environment, energy independence or a better quality of life, public transportation takes us there.

**[publictransportation.org](http://publictransportation.org)**

**PUBLIC TRANSPORTATION  
TAKES US THERE**  
economy > environment > energy > quality of life
